Notes:

1. This chart has been prepared on the basis of products that are approved and registered for the specified crops and diseases / pests.
2. The chart has also been prepared on the basis of products that are available in home garden size packs, which do not require a qualified registered handler, and special storage facilities.
3. Products approved by organic growers are listed separately. It must be pointed out that many of these products are much less effective, requiring more frequent application, often resulting in greater residues. Some organic growers use products that are natural plant extracts but are not registered / approved and are in fact highly toxic.
4. Pesticides in home garden packs listed above are of low toxicity, and environmentally friendly, especially so those printed in red..
Quash Slug killer, and Success Naturalyte are two natural / organic products but are not approved by Bio-Gro at this time
5. Actual trade names have been used to make it easier for home gardeners to find the product.
6. Many gardeners with very large gardens may well consider purchasing commercial size packs from horticultural suppliers in which case there is a much larger range of products to choose from.
7. Always consult the label for withholding periods for each product and each different crop.
